DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 35 – 49 and 65, drawn to saturable absorber mirror for passive mode locking of laser, classified in class 372, subclass 99.
- II. Claims 2, 6-9, 14 – 27, 31 – 32, 50 - 60, drawn to passively mode locked fiber laser cavity, classified in class 372, subclass 18.
- III. Claims 61 - 64, drawn to source for optical coherent tomography, classified in class 356, subclass 477 and 479.

The inventions are distinct, each from the other because of the following reasons: Inventions I, and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it can use any type of mirror for passive mode locking of laser.

Inventions II, and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because is possible use other modelocked (e.g. actively modelocked) for optical coherence tomography.

Inventions I, and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because is possible use actively modelocked for optical coherence tomography.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group III, II is not required for Group I, restriction for examination purposes as indicated is proper.
